

ERPNext POS

v1.0.0

A standalone Windows POS terminal built with Electron + React + Tailwind CSS, connecting to an ERPNext instance (v14/v15) via REST API.

Supports full **offline operation** — items, stock and sessions are cached to disk and invoices are queued locally when the server is unreachable.

Quick Start

- 1 Install **ERPNext POS-Setup-1.0.0.exe** from the release folder.
- 2 Launch **ERPNext POS** from the desktop shortcut.
- 3 Enter your ERPNext URL, username and password, then select your POS Profile.
- 4 Press **F2** at least once while online to cache items, stock and prices to disk.
- 5 The POS now works fully offline until you reconnect.

Keyboard Shortcuts

Global (always active)

Key	Action
Ctrl + L	Lock screen
Ctrl + Q	Log out

Item Search & Grid

Key	Action
F1	Focus item search bar
Ctrl + F	Focus item search bar
Arrow Keys	Navigate item grid tiles
Enter	Open selected item dialog

Bill / Right Panel

Key	Action
F1	New Bill
F2	Sync / Reload — fetches latest items, prices & stock from ERPNext and caches to disk

F3	Draft Save — holds current bill so you can start another
F4	Cancel current bill
F5	Sales Summary (session report)
F6	Focus discount input
F7	Toggle Retail / Wholesale bill type
F8	Toggle Cash / Credit payment mode
F12	Open Payment / Checkout screen
+ / Numpad Add	Open Payment / Checkout screen (works from search bar)
- / Numpad -	Recall — open saved drafts list
↑ / ↓	Move selected row up / down in bill
Enter	Edit quantity of selected bill row
Delete	Remove selected bill row

Payment Screen

Key	Action
Enter	Confirm payment
Escape	Cancel / close payment screen
Tab	Cycle through payment method inputs
F8	Toggle Cash / Credit mode
C	Jump to Cash input
D	Jump to Card input
K	Jump to Koko Pay input
G	Enable Gift Card / Voucher panel

Features

Sales

- Item grid with category tabs, live search and barcode scanner support
- Optional item image display (toggle with **Images ON/OFF**)
- Custom price levels per item — auto-applied for single level, selection popup for multiple
- Retail / Wholesale bill type switching (F7)
- Bill-level discount — fixed amount or percentage (F6)
- Hold and recall multiple draft bills (F3 / -)

- Customer search with outstanding receivable aging display
- Gift Card / Voucher redemption with serial number validation
- Credit (receivable) sales → creates ERPNext Sales Invoice

Offline Mode

- Items, item groups, warehouse stock and POS session cached to disk (7-day TTL)
- Item detail cached to disk on first click — used on subsequent offline visits
- Item search works offline via client-side filtering of the disk cache
- Offline invoices queued to disk and synced automatically when ERPNext reconnects
- Offline queue modal shows per-invoice sync status
- **F2** Sync pre-caches all items and stock for reliable offline use

Session Management

- Detects open POS sessions on login; prompts to open one if none found
- POS session cached to disk — restored automatically when starting offline
- Sales Summary (**F5**) shows totals by payment mode; close session from here
- Lock screen (**Ctrl+L**) with cashier name unlock

Interface

- Dark UI with optional light theme toggle
- Cashier full name shown in title bar (fetched from ERPNext User profile)
- Online / Offline status indicator in title bar
- Offline invoice queue badge — click to open sync modal
- Hide/Show item panel toggle for small-screen layouts

ERPNext Configuration

1. POS Profile

- Create a POS Profile linked to a warehouse and company
- Add payment methods: Cash, Card, Koko Pay, Gift Card etc.
- Set a default customer (e.g. **Walk-in Customer**)
- Assign the profile to users who will log in

2. Walk-in Customer

Create a customer named **Walk-in Customer** in ERPNext — used when no specific customer is selected at checkout.

3. Custom Price Selling Levels (optional)

Add a child table **custom_price_selling_levels** to the Item doctype with these fields:

Field	Type	Label
-------	------	-------

level	Data	Level
marked_price	Currency	Marked Price
discount_amount	Currency	Discount
our_price	Currency	Our Price
active	Check	Active
bill_type	Data	Bill Type (Retail / Wholesale)

4. Gift Card Account (optional)

Set the **gift_card** field on the POS Profile to the ERPNext GL account used for gift card redemptions, or configure it in **Settings → Gift Card Account**.

Requirements: Windows 10 / 11 (64-bit) · ERPNext v14 or v15 · A configured POS Profile in ERPNext
